It's one thing to be secure; it's another thing to prove it

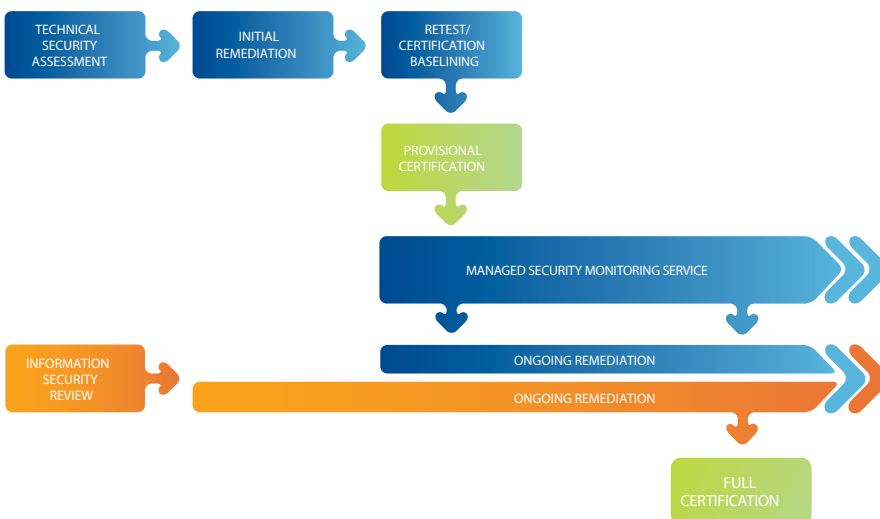

365 Secure - helping our clients to increase revenues, improve security and mitigate the risks of data breaches

Your 365 Secure certification can be incorporated into your website, sales collateral and marketing material to provide proof to your customers, business partners and auditors that you are taking serious, proactive measures to ensure the ongoing security of their information.

As the 365 Secure certification programme is managed, authorised and monitored by Europe's leading provider of independent security advisory and testing services, you and your clients can be fully confident in the integrity and value of the certification.

The certification leverages NCC Group's industry leading skills in IT Security Testing, Monitoring and Consultancy, providing an independently monitored programme.

How it works

The programme is designed to:

- Offer your business real Return On Investment through an improved security posture
- Help you to provide your business partners, clients and auditors with proof that you take the security of their information seriously
- Ensure you retain maximum value from your investment in penetration testing
- Help you implement a better risk management programme

Certification support programme

The support programme is available to all organisations that have achieved, at minimum, provisional 365 Secure certification. It is designed to provide significant added value and assist in helping promote the organisation's proven best practice.

The support programme encompasses the following areas:

- **Web partnership:** We will provide a certification mark for your web site and an associated "click through" page, describing the programme and promoting the enhanced security measures being taken.
- **Marketing material:** We will work with you to promote your certification with co-branded marketing collateral, development of case studies, quotes and other certification information for internal and external communication.
- **Sales support:** We offer sales support to help you sell the benefits of your certification and explain the best practice standards behind it.

Key benefits include:

- **A visible and tangible way** of displaying to customers, business partners and auditors that you are taking proactive measures to ensure the security of their data
- **Retention of clients** and increased sales through a better marketing and sales campaign highlighting the extensive security measures being taken
- **Independence** - The assurance that we give is truly independent and you can be confident in the integrity of our results
- **Improved security** of key applications and infrastructure
- **Potential reduction in Total Cost of Ownership (TCO)** of security through outsourced vulnerability monitoring
- **Peace of mind** - You can focus on your core business, safe in the knowledge that the security, availability and performance of web site(s) and key application(s) is being monitored on your behalf. You will only be alerted when you have a potential problem
- **Improved response times** to potential security breaches through proactive, immediate notification of critical vulnerabilities and advice on remediation
- **Cost effectiveness** - By bringing together the vital areas of information security, availability and web site performance assurance as a single managed service, we are able to ensure that the return on your investment is maximised.

The programme is designed for organisations that:

- Are being asked by their suppliers and partners for security related information and detailed requirements
- Take security seriously and want to ensure that they maximise their investment
- Host web sites and applications for their clients
- Provide SaaS or offer Cloud Computing
- Process credit card details or host processing systems
- Host or hold confidential details for any of their clients
- Provide web based services
- Deliver significant revenues through their web sites
- Want to minimise the damaging impact of slow or non performance of web sites or applications
